

VIQ Playback Utilities

Access audio from the privacy of your home or office

Introducing **VIQ Player - CourtFLOW** and **VIQ Player - Encompass**, VIQ's playback and transcription utilities for the CourtFLOW and Encompass digital audio solutions. For judges, lawyers, and other court officials, these playback utilities allow you to review testimony and court proceedings at your leisure from your own personal computer along with any annotations you might have made as a private annotator. For the transcriptionist, the players transform an ordinary computer into a professional transcribe station, complete with USB foot pedal support and adjustable playback speed. There are two versions of each player utility: Standalone and Networked.

Player Advantages

The **Networked** version of the utilities is completely integrated into the CourtFLOW or Encompass system. You can log in like any other user on the network and review any audio on the system. The **Standalone** utilities act outside the CourtFLOW or Encompass systems for playback and annotations in remote locations.

Solution Advantages

- Allows you to instantly playback any audio recorded with VIQ's CourtFLOW or Encompass suites
- Allows you to quickly pinpoint and move to a specific location in the audio
- Provides synchronized playback of audio and case annotations
- Stores audio electronically so no worries about tapes being ruined, lost, or damaged by age
- Available as a stand-alone solution for portable use or a networked version for access to the CourtFLOW or Encompass network
- Allows Private Annotators to view their private case notes while listening to audio
- Allows you to playback each audio channel individually
- Easy point-and-click interface means minimal training required
- Provides a transcription utility that allows you to produce a transcript that is synchronized with the audio
- Offers powerful search capabilities across recordings
- Allows you to view multimedia attachments like scanned documents, videos, or pictures
- Includes Archive Manager utility for the storage and transfer of audio

Why choose VIQ Player - CourtFLOW or VIQ Player - Encompass?

It's easy... A user-friendly digital solution, there are never any bulky tapes to change or search through.

It's fast... Instantly access any recorded audio with just a few clicks of the mouse.

It's convenient... The players can playback audio recorded with any current or previous version of CourtFLOW or Encompass.

It's complete... Playback, annotations, and transcription, in one convenient solution.

VIQ Player - CourtFLOW and VIQ Player - Encompass are easy to use standalone or networked audio playback solutions for court officials, lawyers, or transcriptionists.

- Capable of playing back audio from current or previous versions of VIQ's CourtFLOW or Encompass
- Supports customized profile and user interface settings so the player utility can have same look and feel as the rest of your customized CourtFLOW/Encompass system
- Networked users can access audio directly from the CourtFLOW/Encompass server
- Standalone users must import CourtFLOW or Encompass audio using Archive Manager before accessing it
